

Once you get your business online, it is imperative that you take full advantage of the 24hour open shop opportunity. Today's digital consumer expects a seamless, personalized, online shopping experience via whatever device they choose.

But providing an exceptional customer experience is a complex network of systems, applications, middleware and databases and it requires integrating your back office applications with your web store so you can streamline order management, simplify payment processing, expedite shipping and enhance personalized service.

SADIM Solution offers you the benefits of collaborating with a single eCommerce solution provider who offers expertise in backend systems, legacy applications, database development, data conversions, process chains, multi-sales channels and information exchange between disparate systems and partners.

So whether you are planning to re-platform your current web-store, looking to integrate mobile channels, or if this is your first venture into eCommerce, our consultants will guide you through your eCommerce strategy and the roadmap of required technologies. We will provide a detailed workflow analysis, a thoughtful implementation plan, and levels of customization based on your specific business needs.

Then through a combination of SLA-grade services, cutting-edge technology skills and best practice methodologies, we will ensure your online business achieves measurable results.

As your eCommerce consulting services partner, we can help you:

- Select and deploy a flexible platform that will grow with your business.
- Improve the speed and quality of customer response.
- Reduce redundancies by automating end-to-end business transactions. Increase administration efficiency while reducing costs.
- Optimize order fulfillment.
- Maximize revenue opportunities that enhance your profitability.
